

Turtle

The Consistency Manager

User Guide

<https://bit.ly/turtle-consistency-manager>

The Basics

Turtle is a practice planner that can be opened directly in your browser or downloaded to your computer. To use Turtle online, go to <https://bit.ly/turtle-consistency-manager>. A downloadable .html version is available through the Github repository (link at the end of this guide). Your data is saved automatically — no account or installation required.

When you open Turtle you land on the home screen. At the top sits a large ⚡ **Quick-Start Practice** button, and below it six more buttons that each take you to a different part of the program. Every sub-screen has a **Back** button in the top-left corner to return home.

Your data is saved to the browser automatically every time you make a change. As long as you keep opening the same file (or the same URL) in the same browser, nothing is lost between sessions.

At the very top of every screen, above the "Turtle" title, is the **Practice Streak** banner showing your recent activity at a glance.

Practice Streak

The streak banner tracks how consistently you practice. It shows:

- **A 7-day timeline** — the last seven days appear as dots. Days within your active streak are highlighted in gold with a ✓. Today's dot is marked separately so you can see at a glance whether you've already been active today.
- **Your streak count** — the number of consecutive days you've practiced, shown in the top-right corner of the banner.
- **A message** — encouraging text that escalates as your streak grows, from "X days strong" all the way to milestone messages at 7, 14, and 30 days.

How the streak works:

- Generating a plan (including a Quick-Start plan), or logging time, counts as activity for the day.
- If your last activity was yesterday, the streak extends by one.
- If your last activity was two or more days ago, the streak resets to 1.
- Multiple sessions in the same day don't multiply the count — the streak moves forward by one day at a time.
- The streak resets to zero if you use Erase Everything in Save Data.

Quick-Start Practice

Quick-Start is the fastest way to get moving — no assignments required. Instead of setting anything up, you pick a category, tell Turtle how much time you have, and get an instant practice plan.

To use Quick-Start:

1. From the home screen, tap ⚡ **Quick-Start Practice**.
2. Choose a category: 🤸 **Flexibility**, 🔥 **Core**, or 💪 **Strength**.
3. Enter how many minutes you have available.
4. Tap **Generate Plan**.

Turtle builds a sequence of activities sized to fit your available time, cycling through the routine as many times as your time allows. Each step is shown as an assignment card — identical in appearance to regular assignment cards — with a teacher of "Turtle," an importance rating, the chosen category as its tag, and a recommended time banner.

Things to know about Quick-Start

- **Separate from your assignments.** Quick-Start never creates, edits, or removes anything in your assignment list — it's a self-contained session generator.
- **Still logs to your Activity Log and streak.** Time spent on Quick-Start steps shows up in your Activity Log alongside regular assignments and counts toward your daily streak. Short breaks/rest periods are not logged.
- **Intelligent reordering.** Each category follows its own preset routine, reordering cycle-to-cycle so that lower-priority elements (like backbend work or ankle rises) get prioritized if they've been skipped in recent cycles.
- **Plans are not saved.** Generate a new one anytime you want to practice.

Assignments

An assignment is the core unit of the planner. Each one stores:

- **Teacher** — who gave the assignment (optional)
- **Assigned Activity** — a description of what needs to be done
- **Type** — Definite (has a specific due date) or Indefinite (no deadline)
- **Due Date** — month, day, and year (only for Definite assignments); the day of the week is calculated and shown automatically
- **Repetition** — how often it recurs: Once, Daily, or Weekly
- **Estimated Time** — roughly how many minutes the assignment takes in total per session
- **Importance** — a priority level from 1 (very low) to 5 (very high)
- **Tag** — an optional colour-coded category label (see Tags below)

Adding an Assignment

Go to **Add New Assignment**. Fill in the fields and click **Add Assignment** at the bottom.

A few things to know:

- **Teacher is optional.** Leave it blank if the assignment has no specific teacher.
- If you set Type to **Indefinite**, the due date fields disappear — that's expected.
- When you enter a month, day, and year for a Definite assignment, the day of the week is shown automatically below the date fields.
- You can also import from a CSV file to fill the form automatically (see the CSV section below).
- Once the form is filled, **↓ Export CSV** saves it as a shareable file without adding it to the planner. The form clears after exporting.

Tags

Tags are colour-coded labels you can attach to any assignment to help organise them (e.g. "Technique", "Choreography", "Conditioning"). Quick-Start automatically uses three reserved tags — **Flexibility**, **Core**, and **Strength** — to mark its generated steps; you can reuse these on your own assignments too.

- **Creating a tag:** Type a name in the tag name box, pick a colour with the colour picker, and click **+ Add Tag**. The tag is created and automatically selected.
- **Selecting a tag:** Click a tag chip to select it (a highlighted border appears). Click it again to deselect. Only one tag per assignment.
- **Deleting a tag:** Click the × on any tag chip. Assignments that used it become untagged.

Tags are shared across all assignments. In **View Assignments**, a filter bar appears at the top when you have tags — click one to show only matching assignments.

Viewing Assignments

View Assignments shows all your assignments as cards. Each card displays the assigned activity, priority badge, all details, the current time progress, and the tag at the bottom.

Clicking a card opens a popup with four options:

- **Close** — dismisses the popup
-  **Remove** — shows a confirmation panel before permanently deleting the assignment
-  **Edit** — opens a full edit form inside the popup, pre-filled with the assignment's current values
- **↓ Export as CSV** — downloads the assignment as a CSV file

If you have tags, use the filter bar at the top to narrow the list by category.

Planning Your Day

Plan Day generates a recommended practice schedule from your own assignments, based on how much time you have available.

5. Enter the number of minutes you have today.
6. Click **Generate Plan**.

Turtle scores each assignment based on deadline proximity, importance, and repetition type. Daily assignments get a priority boost so they consistently appear at the top. Assignments that have already met their time quota for the day (daily) or week (weekly) are treated as lower priority.

Each assignment in the plan shows its details and a prominent **Recommended Time** banner.

Time is logged automatically when you generate a plan. If you end up spending more or less time than suggested, you can adjust it manually in **Log Time**.

Looking for a plan without setting up assignments first? Try **Quick-Start Practice** instead — see above.

Logging Time

Log Time manually records how long you spent on an assignment.

7. Select an assignment from the dropdown — a preview card appears.
8. Enter the minutes spent.
9. Click **Log Time**.

How time is tracked depends on repetition type:

- **Once** — accumulates a running total. Card shows *Time Spent: X / Y minutes*.
- **Weekly** — tracks time logged this week. Resets automatically every Monday. Card shows *Time Spent This Week: X / Y minutes*.
- **Daily** — tracks time logged today. Resets automatically every day. Card shows *Time Spent Today: X / Y minutes*.

Logging time also counts toward your daily streak.

Editing an Assignment

Click any assignment card in View Assignments, then click  **Edit** in the popup. The form opens pre-filled with all current values, including:

- The current time progress for that repetition type (today's minutes for daily, this week's for weekly, total for once)
- The assigned tag, if any

- All date fields including the calculated day of the week

Make your changes and click **Save Changes**. The assignment list refreshes automatically. Click ← **Back** to return without saving.

You can also create new tags from within the edit panel.

Removing an Assignment

Click any assignment card in View Assignments, then click  **Remove** in the popup. A confirmation panel appears showing the assignment details. Click **Remove Assignment** to confirm, or ← **Back** to cancel.

Removal is permanent and cannot be undone.

Activity Log

Activity Log shows a summary of your practice over the past 7 days — including both regular assignments and Quick-Start sessions.

- Days are shown newest first, each with a total minutes header.
- Within each day, activities are listed in the order you first practiced them.
- Each row shows the activity name, teacher and repetition type as a subtitle, the tag chip (if any), and the total minutes logged that day.
- If you practiced the same assignment multiple times in one day, only the combined total is shown.
- Quick-Start break/rest steps are intentionally excluded from the log to keep it focused on actual practice time.

Activity is recorded automatically when you generate a plan (Plan Day or Quick-Start) or manually log time. The log retains data for the 7 most recent days; older days are dropped automatically.

Save Data

Because Turtle stores data in the browser, it's worth backing up regularly — especially before switching browsers, clearing browser data, or moving to a new device.

- **↓ Download My Data** saves a .json file containing all your assignments, tags, streak data, and activity history. Keep this somewhere safe.
- **Restore from a File** loads a previously downloaded data file, replacing everything currently in the planner.
- **Erase Everything** permanently deletes all assignments, tags, streak data, and activity history. You will be asked to confirm. This cannot be undone — download a copy first.

Note: Quick-Start plans aren't persisted (nothing to back up), but any Quick-Start activity already recorded in your Activity Log is included in your backup.

CSV Import & Export

CSV files let you move individual assignments between instances of Turtle, or prepare assignments in a spreadsheet and import them directly.

Importing a CSV

In **Add New Assignment**, scroll to the "Or import from a CSV file" section and upload a .csv file. Turtle reads it and fills the form automatically — you can review and adjust before clicking **Add Assignment**.

Exporting a CSV

- **From the Add form:** Fill in the fields, then click ↓ **Export CSV**. The file downloads and the form clears.
- **From View Assignments:** Click any assignment card, then click ↓ **Export as CSV** in the popup.

CSV Format

Each file represents a single assignment with one header row and one data row:

```
teacher,task,type,due_month,due_day,due_year,repetition,time,importance,tag,tag_color,time_spent
```

```
Ms Smith,Pirouette drill,definite,Jun,6,2026,once,30,4,Technique,#e74c3c,0
```

Column	Required	Notes
teacher	Optional	Any text; leave blank if no teacher
task	Yes	The assigned activity description
type	Yes	definite or indefinite
repetition	Yes	once, daily, or weekly
time	Yes	Positive whole number (minutes)
importance	Yes	1 to 5
due_month	If definite	Jan Feb ... Dec
due_day	If definite	1 to 31
due_year	If definite	4-digit year e.g. 2026
tag	Optional	Tag name; created automatically if new
tag_color	Optional	Hex colour e.g. #e74c3c; used only if the tag doesn't already exist
time_spent	Optional	Minutes already logged; defaults to 0

If a tag with the same name already exists, its stored colour is kept regardless of what `tag_color` says. The day of the week is calculated automatically from the date when the file is imported.

Tips

- **Short on time? Start with Quick-Start.** It requires zero setup and still builds your streak and logs your activity.
- **Generate a plan at the start of your session.** Time is logged automatically, so you don't need to do anything extra afterward.
- **Use importance honestly.** The planning algorithm weighs importance heavily — save 4 and 5 for genuinely critical assignments.
- **Daily assignments reset every day; weekly ones reset every Monday.** If a daily assignment is showing 0 minutes on a new day, that's intentional.
- **Check the Activity Log to see patterns.** If certain assignments keep showing up with low time logged, consider adjusting their estimated time or importance.
- **Back up before switching devices or browsers.** Data lives in the browser — it doesn't follow you automatically.
- **Tags help filter and focus.** Filtering by tag in View Assignments makes it easy to see only what's relevant to a particular area of practice.
- **The due year on older assignments may need updating.** If you had assignments before the date system was updated, open each one in Edit and confirm the year is correct.
- **Data doesn't link between versions.** If you first use Turtle through the published page and later download, the data does not carry over.

Our History

Turtle is a high schooler's passion project, created to help students and athletes manage their time and practice activities better. It emphasizes consistency and daily work — no matter how little — to achieve far goals into the future.

Turtle is a project that is continuing to be developed and tested. Changes might occur frequently, in order to provide a better experience for everyone. Thank you for joining the Turtle community! Feel free to reach out with feedback.
